

# Filterwrap™

in the house and garden;

- separates
- filters
- drains

1

## Paving

**Filterwrap™** ensures correct drainage and prevents risk of subsidence.

2

## Garden paths

**Filterwrap™** prevents the natural soil from mixing with the sand or gravel and reduces maintenance.

3

## Drainage

**Filterwrap™** envelopes the drain trench and improves the efficiency of the drain by holding back the fine particles of soil.

4

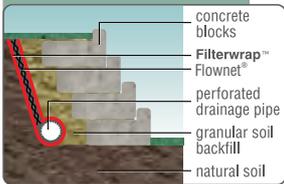

## Roof gardens, window boxes

**Filterwrap™** separates the drainage course from the top soil and prevents particles entering the outlet system.

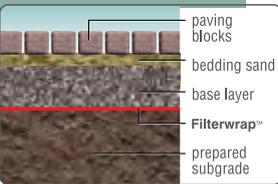

## Filterwrap™ applications:

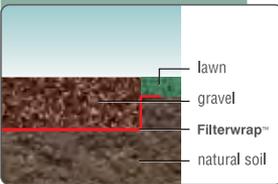

1. Drainage behind segmental retaining walls.

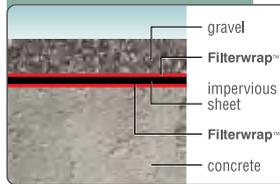

2. Driveway.

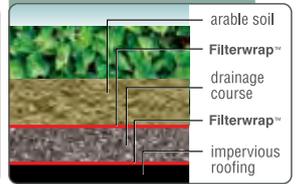

3. Underneath gravel path.

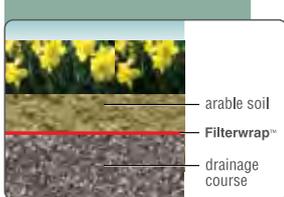

4. Protection against perforation of impervious sheeting.

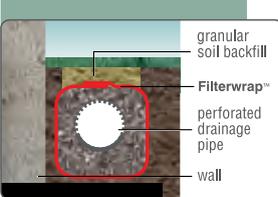

5. Roof Gardens/Atriums.

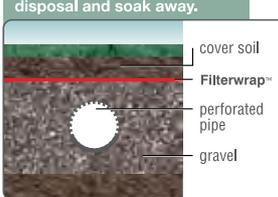

6. Window boxes.

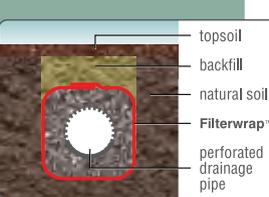

7. Drainage pipe.

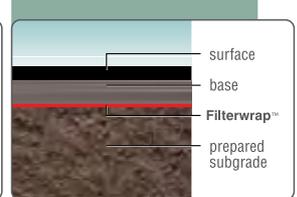

8. Underground waste disposal and soak away.

9. Perimeter subsoil drain.

10. Separation/Stabilisation.
